

- CREATION series -  
**CREATION C-PL/ND8, C-PL/ND16**

**MADE IN JAPAN**

Circular PL filter helps to increase color saturation and to reduce reflections from water, glass and other surfaces. ND filter can reduce light intensity without changing color balance. There is the occasion that you want to use both C-PL filter and ND filter to reduce reflections and set the slow shutter when shooting water splash, streaming, etc. This CREATION C-PL/ND filter has dual purpose polarizer and ND functions two-in-one and there is no need to stack two filters. This filter employs slim profile frame (thickness is **5.0mm** without thread) so that vignetting can be prevented.

**CREATION C-PL/ND8**

Circular PL with 1/8 reduction of light intensity (Exposure value: 3 stops, Density: 0.9)

Available Size

58 mm

77 mm

**CREATION C-PL/ND16**

Circular PL with 1/16 reduction of light intensity (Exposure value: 4 stops, Density: 1.2)

Available Size

58 mm

77 mm

**Note:**

The transmission rate of circular PL filter varies depending on the position of rotating ring. The values of ND8 and ND16 are the center density when rotating the ring in whole angle.

Key Features

- Anti-reflective multi-coating
- Satin finished frame
- Knurling on the frame for easy operation
- Blackened outer rim for reducing inner reflections
